BRAIN MRI WITH CONTRAST

Brain MRI - Axial T1 Post-Contrast & FLAIR

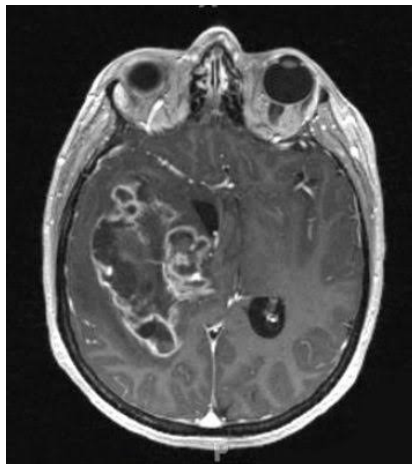

- Heterogeneously enhancing intra-axial mass identified in the right frontoparietal parenchyma.
- Perilesional vasogenic edema noted extending along adjacent white matter tracts.
- Compression and local effacement of the frontal horn of the lateral ventricle.
- Midline structures show mild shift to the contralateral side.
- Posterior fossa, cerebellum, and brainstem structures appear normal.
- Flow voids in the major intracranial arteries are preserved.

IMPRESSION

Right frontoparietal intra-axial enhancing neoplasm with mass effect, suspicious for high-grade glioma.

ADVICE

Urgent neurosurgical consultation for stereotactic biopsy vs surgical resection; systemic staging.

Thanks for Reference
