BRAIN MRI WITH CONTRAST

Brain MRI - Axial T1 Post-Contrast & FLAIR

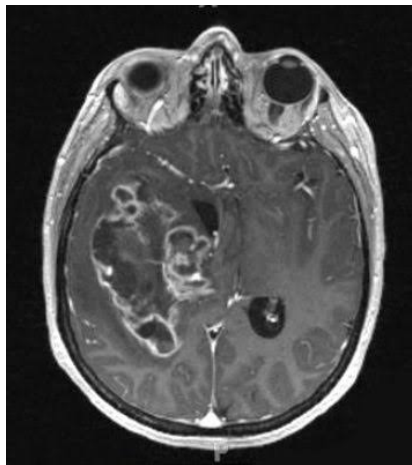

- Heterogeneously enhancing intra-axial mass in the right frontoparietal parenchyma measuring 3.8 x 3.2 cm.
- Perilesional vasogenic edema extending along white matter tracts into the centrum semiovale.
- Compression and local effacement of the frontal horn of the right lateral ventricle.
- Midline structures demonstrate 3mm shift to the left.
- Posterior fossa, cerebellum, and brainstem appear normal.
- Major intracranial arterial flow voids are preserved.

IMPRESSION

Right frontoparietal heterogeneously enhancing intra-axial mass with surrounding vasogenic edema, highly concerning for high-grade glioma (Glioblastoma).

ADVICE

Urgent neurosurgical consultation for stereotactic biopsy vs surgical resection; systemic staging.

Thanks for Reference
